

Operating Systems

LAB#03

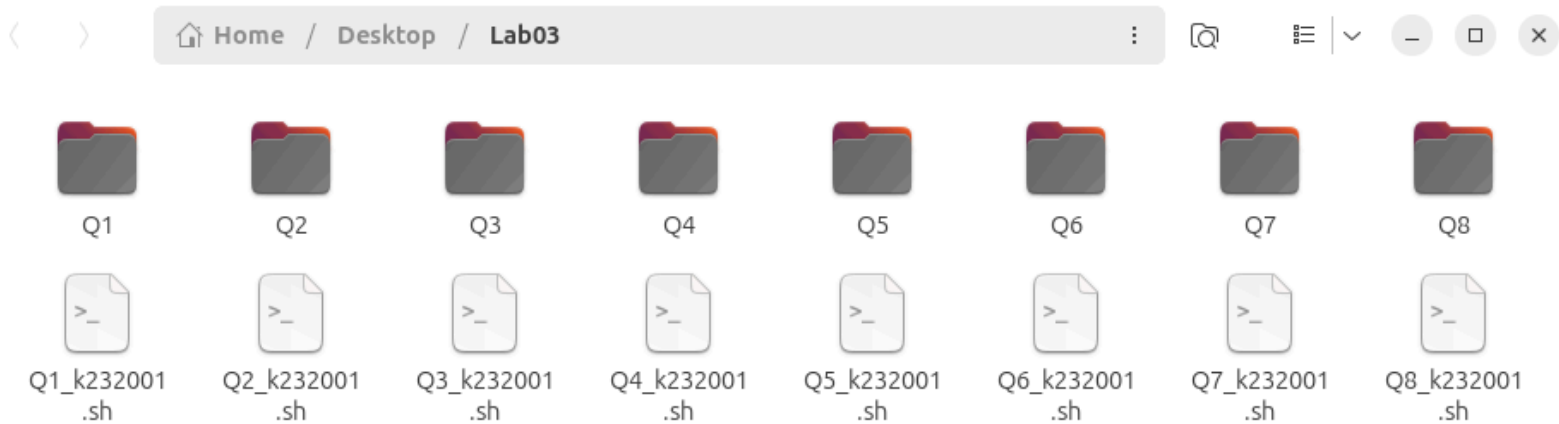

23K-2001

BCS-4J

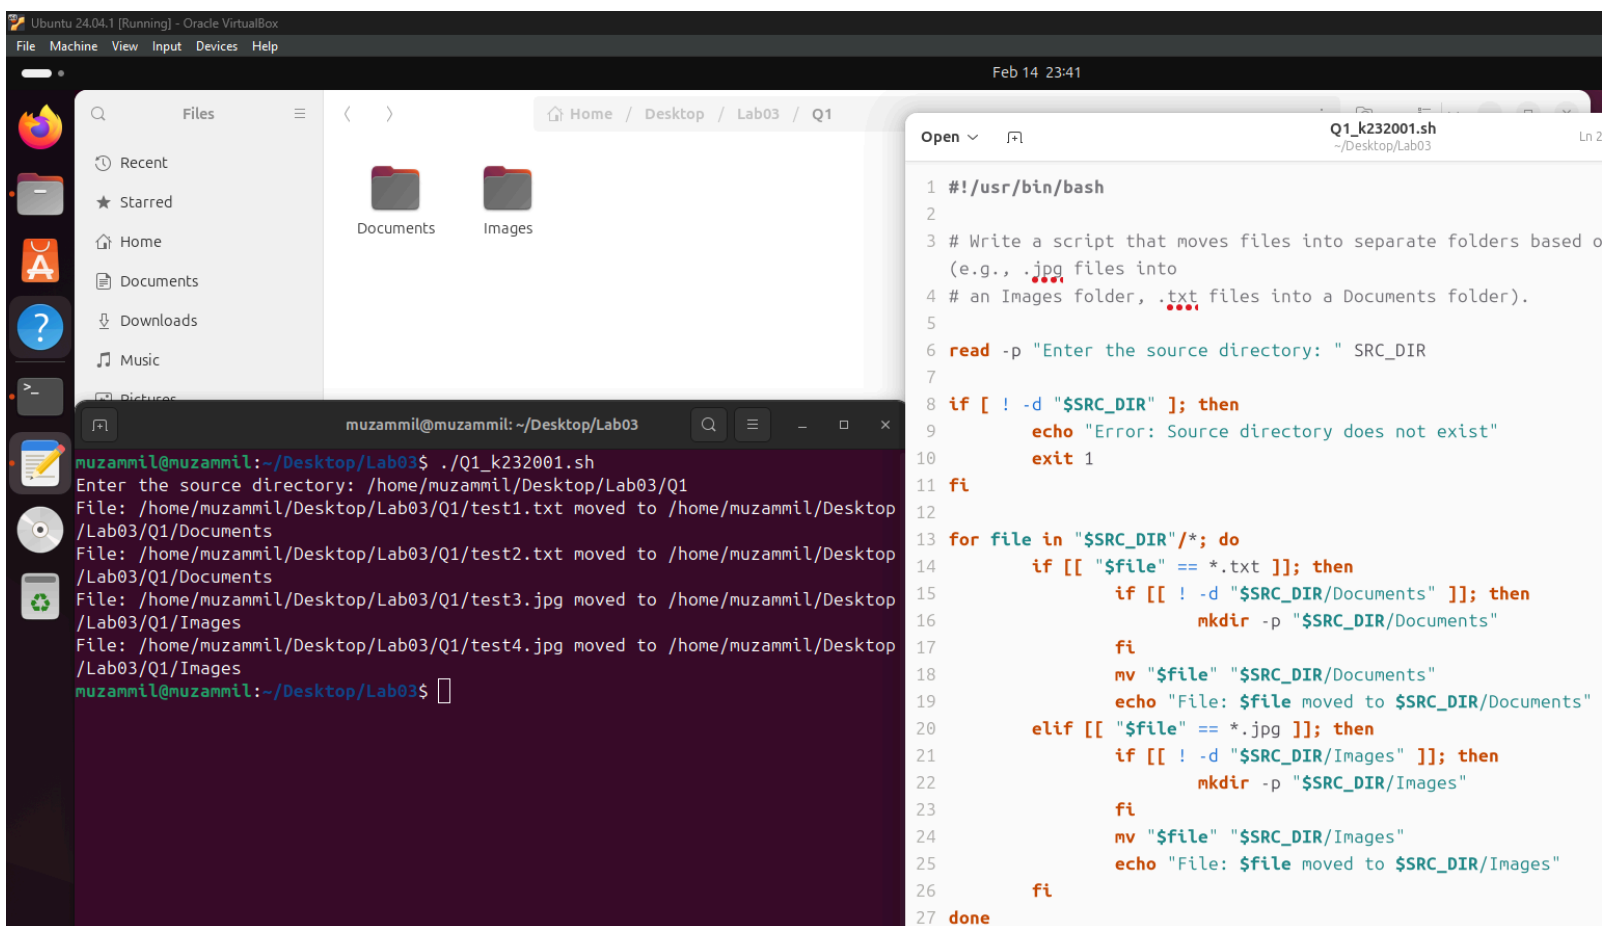

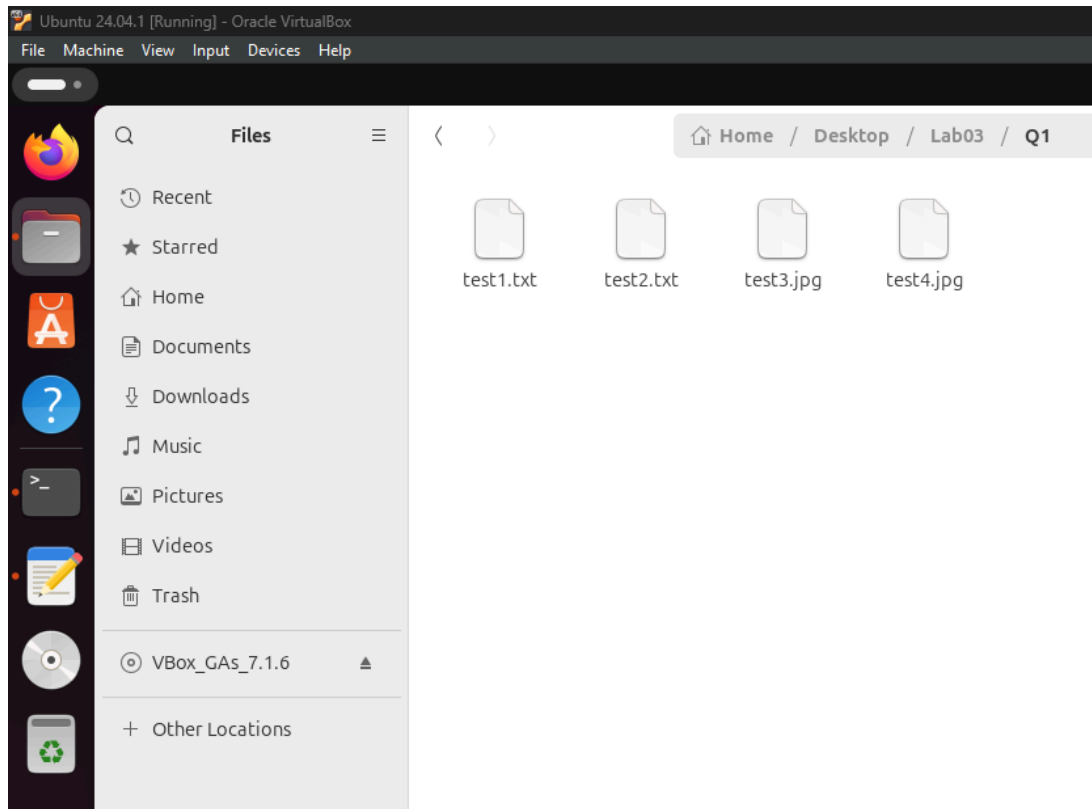

Structure of Tasks:

Each question's script operates on the specific folder, inside the main folder (Lab03). E.g: To test the functionality of Q8's script, provide the folder path of Q8 while running Q8_k232001.sh

The scripts reside outside their specific question's folder to provide ease & an organized manner to operate those scripts.

Q1:

```
#!/usr/bin/bash
```

```
# Write a script that moves files into separate folders based on their extensions (e.g., .jpg files  
into
```

```
# an Images folder, .txt files into a Documents folder).
```

```
read -p "Enter the source directory: " SRC_DIR
```

```
if [ ! -d "$SRC_DIR" ]; then  
    echo "Error: Source directory does not exist"  
    exit 1  
fi
```

```
for file in "$SRC_DIR"/*; do  
    if [[ "$file" == *.txt ]]; then  
        if [[ ! -d "$SRC_DIR/Documents" ]]; then  
            mkdir -p "$SRC_DIR/Documents"  
        fi  
        mv "$file" "$SRC_DIR/Documents"  
        echo "File: $file moved to $SRC_DIR/Documents"  
    elif [[ "$file" == *.jpg ]]; then  
        if [[ ! -d "$SRC_DIR/Images" ]]; then  
            mkdir -p "$SRC_DIR/Images"  
        fi  
        mv "$file" "$SRC_DIR/Images"  
        echo "File: $file moved to $SRC_DIR/Images"  
    fi  
done
```
